Device Number: 79

Mailed to: E, D, C/41-0001.

Type MRC2 Microprocessor Reclosing Relay

Application

The MRC2 microprocessor-based relay provides automatic reclosures of an ac or dc electrically operated circuit breaker opened by a protective relay or other external device. Relay models are available for supply voltages of 48/125vdc and 120vac, 250vdc and 230vac, or 24vdc. Settings are made by front panel push-buttons and a 32 character LCD display. LED indicators provide status indication.

The MRC2 may be programmed for 0 to 4 reclosures. The Open Interval times are individually adjustable from 0 to 250 seconds in increments as follows:

- 0.01 seconds for range 0-1 seconds
- 0.1 seconds for range 1-10 seconds
- 1 second for range 10-250 seconds

A Reclose Fail timer may be enabled. The setting range is 0 to 250 seconds. Should the breaker not respond to a close signal in the set time, the relay will go to Lockout.

The Reset Timer is adjustable 0 to 250 seconds. Reset timing begins from zero each time the breaker is closed. An optional input (Delay Reset/Pause) suspends reset timing as long as the input is energized. A Maximum Cycle Timer that starts timing at the first trip and ends timing when the relay has reached reset/home, may be used to drive the relay to lockout if the cycle time is excessive.

Output contacts for Close, Instantaneous Enable, and Self-Check Alarm are provided as standard. Optional contacts provide Lockout, In Progress, and Failed Reclose indication, and a contact to Block Tap Changer operation.

Features:

- 0 to 4 Reclosures
- Drive to Lockout
- Breaker Operations Limiter
- Reclose Counter/Limiter
- Instantaneous Trip Enable
- Status Contacts:
 - Lockout, Failed Reclose, In Progress
- LED Status Indicators
 - Power, Failed Reclose, Home, Lockout, Lockout LTC
- LCD Display with Data Scroll
- Non-volatile Memory Storage of all settings
- Self-diagnostics
- FT-21/FT-22 Flexitest™ Case

A Follow Breaker function may be activated in the settings process: if during the open interval time the relay sees the breaker close (52/b transfers), then the relay will step forward in its program and begin the reset timer. Should the breaker open before the reset time expires, the timing for the next open interval in the reclosing sequence will begin.

An optional 52/a input provides redundancy. Should a disagreement exist between the normally opposite states of the 52a and 52b inputs for more than 0.1 second, the relay will go to Lockout.

The MRC2 can be set by internal link to "power-up to last state" or "power-up to lockout". When set for "power-up to lockout" and operated from ac control voltage, the relay has the ability to ride through reduced control voltage conditions for sufficient time for the fault to be cleared.

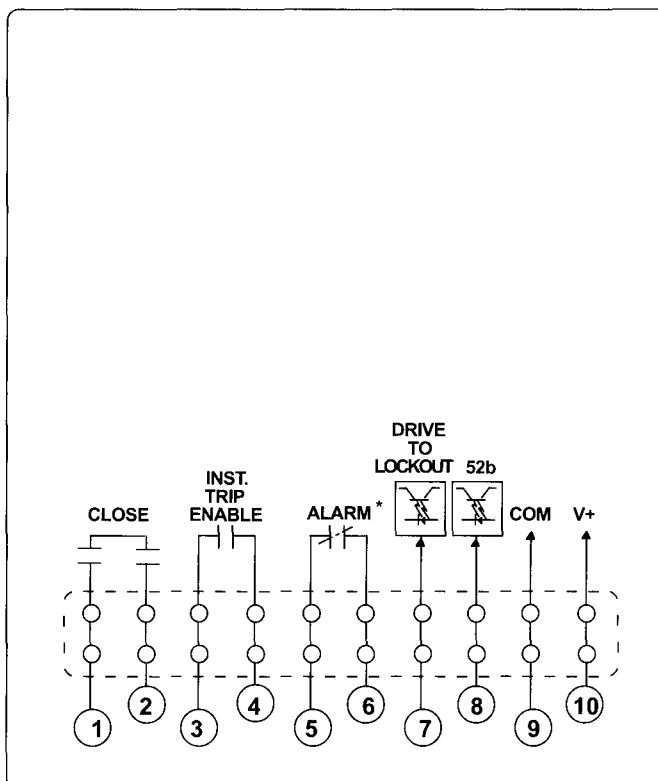

For maintenance purposes a Cumulative Reclosures to Lockout function may be enabled. This counter keeps track of the total number of breaker reclosures, and when the set point is reached the relay will be driven to Lockout.

A Breaker Operation function may be enabled in the settings process to limit the breaker from excessive interruption duty. The MRC2 relay counts breaker operations (Limit Counter) in a set period of time (Limit Timer), and when reached will not allow reclosure until the Recovery Timer has elapsed.

In addition to the Cumulative Reclosures Counter, the relay maintains counters of the number of successful reclosures for each reclosing stage, and of the total number of operations to lockout.

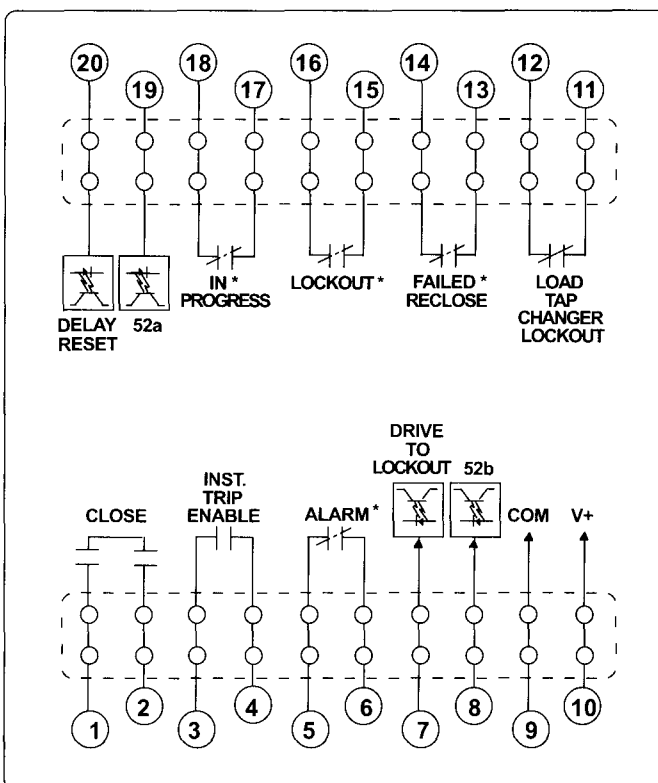

Optional communication capability is available using a Product Operated Network Interface (PONI) providing either an RS232C port or an INCOM™ port. Relay settings may be viewed or changed, status and counters viewed and changed, the Close contact actuated, and Lockout forced. Password protection prevents unauthorized access to settings and operations.

INCOM™ is a trademark of the Cutler-Hammer Corporation.

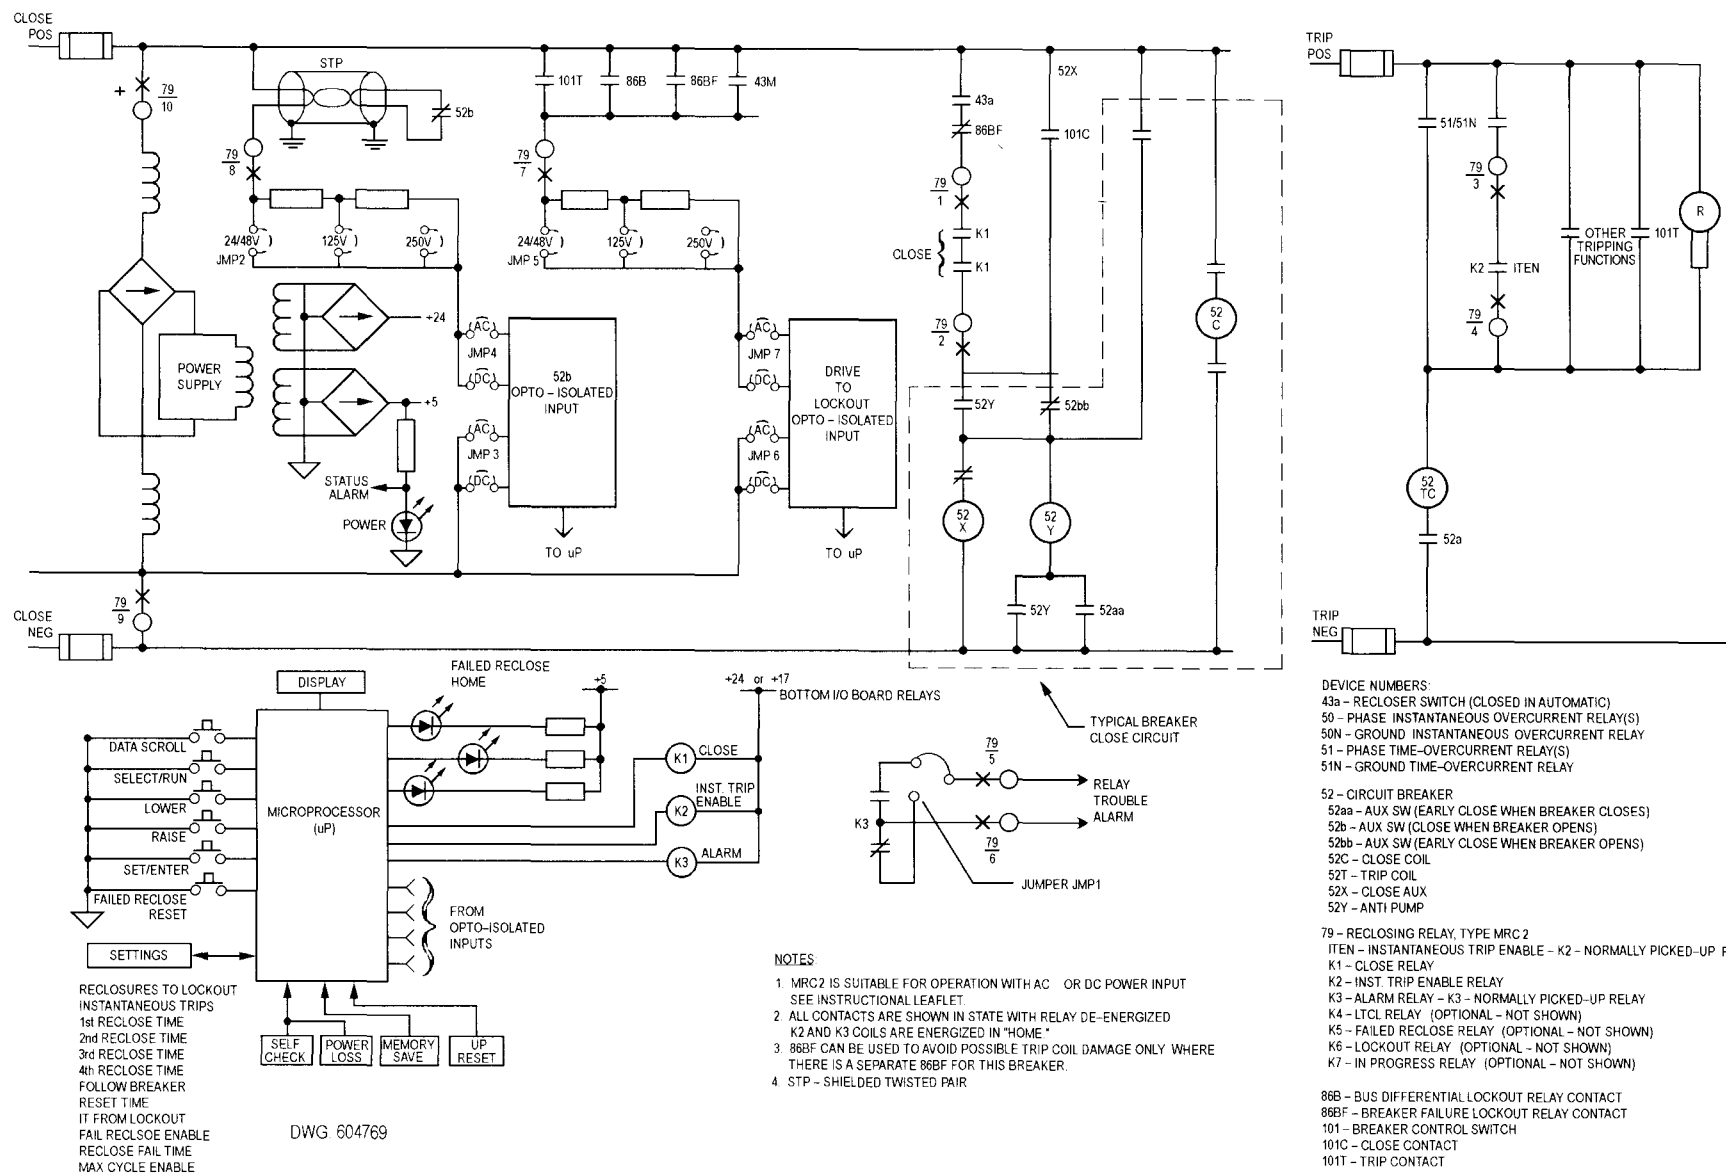

* JUMPER CONFIGURABLE FOR N.O. OR N.C.

BASIC INTERNAL AND EXTERNAL CONNECTIONS TYPE MRC2

ABB MRC2 Microprocessor Reclosing Relay

Catalog Number			
MRC2	2	R	1
Standard Features			
• 1 to 4 Reclosures			
• Lockout LED			
• Reset LED			
• Reclose Fail alarm LED			
• Maximum Cycle Time			
• Power Up to Last State or Power Up to Lockout			
• Follow Breaker			
• Cumulative Reclose Counter & Limiter			
• Breaker Limiting Feature (Includes Breaker Limit Counter & Timer and a Breaker Recovery Timer)			
• LCD Display with Data Scroll			
• Optically Isolated Inputs:			
52B			
Drive to Lockout			
• Output Contacts:			
Instantaneous Trip Enable (N.O.)			
Alarm Relay (N.O. or N.C.)			
Close Relay (N.O.)			
Additional Features			
• Optically Isolated Inputs:			
52A			
Delay Reset			
• Output contacts:			
Lockout Relay (N.O. or N.C.)			
Failed Reclose Relay (N.O. or N.C.)			
Load Tap Changer Lockout Relay (N.C.)			
In Progress Relay (N.O. or N.C.)			
(FT-22 Case) 2			
• No Additional Features,			
(FT-21 Case) 1			
Communications Options			
RS232			
INCOM			
No communications			
Power Supply			
48/125 VDC & 120VAC			
250 VDC & 230 VAC			
24 VDC			

Specifications

<u>Specifications</u>	Standards:		
	ANSI C37.90; IEC – 255		
Dimensions	Contact Ratings:		
Refer to DB41-076 for FT-21 and FT-22 case dimensions		@125VDC	@250VDC
Shipping Weight:	Closing	30A	30A
FT-21: 11.5 lbs/5.3 Kg	Continuous	5A	5A
FT-22: 13 lbs/5.9 Kg	Break	0.5A	0.25A
Operating Temperature Range:	Additional Information: Instruction Book IL 41–665.		
-40°C to + 65°C
